

ABSTRACT

The purpose of the invention is to provide a
conductive brush excelling in functionality and being
5 useful as a cleaning brush in the color copier using the
color toner of fine grain than before.

The present invention is a conductive brush, which
comprises a base fabric and a mixed fiber of a
polyethylene terephthalate fiber and a nylon-66 fiber
10 being raised on the base fabric by pile-flocking and,
said polyethylene terephthalate fiber and/or said nylon-
66 fiber having a volume resistivity of 10^0 to $10^6 \Omega \cdot \text{cm}$.
